RE: Application to Executive Role

Dear Hiring Committee / To Whom It May Concern,

I am writing to express my strong interest in joining your organization in a senior scientific, technological, or executive leadership capacity. As a doctoral-level **Biologist (PhD)** and active **AI Automation Entrepreneur**, I bring a rare dual background combining rigorous experimental life science research with production-grade artificial intelligence engineering. Over the past five years, my career has spanned high-impact academic institutes across Germany, Hungary, and South Africa, as well as founding a technology agency delivering autonomous AI workflows. I am eager to apply this unique interdisciplinary skill set to drive innovation and operational excellence within your esteemed organization.

During my doctoral research at the Institute for Experimental Cardiovascular Medicine (IEKM), University of Freiburg, I led advanced investigations into novel light-gated potassium channels for cardiac optogenetics and anti-arrhythmic therapy. Executing high-throughput single-cell patch-clamp electrophysiology, engineering adenoviral expression vectors under strict S2 Good Laboratory Practice (GLP) standards, and co-developing quantitative photocycle models allowed me to publish primary findings in premier international journals including *Science Advances* (2025) and *Biophysical Journal* (2026). My prior master's research at Eötvös Loránd University (ELTE) focused on RecQ helicases and recombinant protein purification, solidifying my expertise in biophysical assays and quantitative data science.

Complementing my academic foundations, as Founder & Lead AI Solutions Architect at Scinovalities AI Automation Agency, I translate complex systemic challenges into scalable, high-throughput digital solutions. I have architected enterprise-grade autonomous voice agents, agentic workflows, and specialized operating systems that automated up to 40% of manual administrative workloads via modern technology and boosted client operational throughput by 28%+. This entrepreneurial journey has refined my capacity to lead multi-disciplinary technical teams, manage end-to-end product lifecycles, and bridge deep domain research with commercial deployment.

Whether advancing cutting-edge biotechnology, architecting intelligent data pipelines, or leading strategic R&D initiatives, I thrive at the intersection of scientific curiosity and practical execution. I am a collaborative mentor, proven project leader, and clear communicator comfortable engaging with researchers, executive stakeholders, and global partners alike.

Thank you for your time and consideration. I welcome the opportunity to discuss how my scientific background, AI engineering expertise, and strategic leadership can contribute to your team's ongoing success.

Sincerely,

Dr. Andries Napo Leemisa, PhD

Biologist & AI Automation Entrepreneur
